

FLUSH-MOUNT CLEATS ADD ELEGANCE TO LARGER YACHTS

The clean, flowing lines of a well-made boat define elegance and grace. Eliminating the knobby appearance associated with traditional mooring cleats, 305mm and 381mm pull-up cleats from Accon Marine preserve a boat's fluid style by retracting flush when not in use.

Measuring 320mm L and 94mm at its widest point, Accon's 305mm flush-mount cleat extends 152mm to accommodate larger mooring lines. Constructed of tough, marine-grade 316 stainless steel for extreme strength and durability, it through-bolts with four 5/16" diameter stainless fasteners. This spreads the load over a broad area for reduced hull stress. Users simply pull the cleat up to secure a line, then push it back down flush to stow neatly in its base when not needed.

At 432mm L x 135mm W, and 180mm H when extended, Accon's 381mm model is the largest flush-mount cleat available. Manufactured with marine-grade 316 stainless steel, it comes in two styles. The through-bolt version installs with four 3/8" stainless fasteners. For an exceptionally clean, seamless appearance, the stud-mount model has fully concealed attachment points. Accon Marine 305mm and 381mm pull-up cleats come with a waterproofing cup and backing plate, which can serve as a handy cut-out template.
