

## FLUSH SKI TOW ADDS FINISHING TOUCH

Form meets function with Accon Marine's 198 Ski Tow. Built of polished stainless steel, the tow sits flush to the surface. This prevents snagging of lines and feet, and adds a finishing touch to any boat.

The 198 Ski Tow is solidly constructed for years of enjoyment, with an innovative design that fits all standard tow rope diameters. It consists of a unique, patented, four-piece assembly—the main body, sealing cup, backing plate and gasket. Measurements are 89mm L x 89mm W x 31.75mm D.

Adding an Accon Ski Tow to a boat is easy. Owners simply drill a 63.5mm hole in the transom and four pilot holes, and attach the Ski Tow with 1/4" screws.

For over 30 years, the name Accon Marine has been synonymous with superior quality marine metalwork. The company offers a broad range of flush-mount deck hardware, best known for its popular Pop-Up® Cleat.
