

## LIFTING CLEATS COMPLEMENT ANY BOAT DESIGN

While the clean lines of contemporary boat designs appeal to many owners, they can present challenges when it comes to preserving overall utility. Multipurpose flush-mount lifting cleats from Accon Marine both save deck space and maintain a vessel's streamlined look.

This versatile hardware incorporates a traditional mooring cleat with a secure lifting point in a single, stylish unit. When not in use, it recesses flush to the deck to enhance both safety and aesthetics.

Accon Marine's 203 Lifting Cleat utilizes high-strength, marine-grade 304 stainless steel for its lifting hardware, including the full 305mm rod, cross bar, sling and bow eye. The 152mm cleat is formed from 316 stainless steel for greater corrosion resistance. With a working load to 1,814 kg, it attaches with four #10 screws and comes with a cut-out mounting template.

Available in 114mm, 152mm, 203mm and 254mm sizes, Accon Marine's 209 Series Lifting Cleats also feature heavy-duty 304 and 316 stainless steel construction. They are likewise provided with a 305mm rod, cross bar, sling, and bow eye, along with a cut-out template for easy installation. The 254mm cleat is also available in a stud mount version.
