

## BOAT HOOKS TESTED, PROVEN DURABLE AND RELIABLE

Most owners don't think much about their boat hooks—until they break just as they're entering a slip on a windy day. Team Boat Hooks from Davis Instruments are tested and proven superior in punishing laboratory conditions. Durable and reliable, they provide boaters peace-of-mind every time they use these versatile tools.

During recent testing against four other brands, the competitors' hooks tore, broke and even exploded when increasing weight was added. The Davis hook was proven to be four times stronger. It took 408kg of pulling force before the stake that pins it into the shaft failed—the hook simply would not break.

All Davis Instruments Team Boat Hooks include the company's UV stabilized Lexan polycarbonate hook. It's guaranteed for life to be unbreakable. The tip has a 19mm thread to fit a deck brush, mop or other accessory. A high-visibility orange cap covers the threads when not needed and protects boat finishes when fending off.

Another point of failure during testing was the locking mechanism. With increasing weight, tubes slipped and parted. This began in some competitors' models with a mere 29kg of pulling. The Davis locking mechanism withstood a grueling 154kg.

-more-

The boat hook tubing is made from anodized aluminum—inside and out—for years of corrosion-free use. A molded vinyl grip with a palm swell provides a sure grasp, even when wet. And if it's dropped in the water, it floats for quick retrieval.

Lightweight, Team Boat Hooks are available in three configurations: a two-section model that adjusts from 140cm–240cm, and two three-section versions with that expand from 100cm–240cm and 140cm–370cm. They're easy to use. A simple twist extends the pole. Rotating in the other direction solidly locks the sections in place.

From grabbing a mooring or dock line to safely fending off, Team Boat Hooks have a multitude of uses on board. They can even be used to brush the deck or waterline, pass bags of groceries, pull on a branch to reclaim a costly lure, or retrieve a favorite hat blown overboard. No boat should be without one.
