DELTA "T" SYSTEMS LAUNCHES WEBSITE REDESIGN

Delta "T" Systems, global leader in engineered recreational, commercial and military marine engine room ventilation, has launched a redesign of its website. The domain remains www.deltatsystems.com.

Built in HTML5, the next-generation website features a clean, modern design. Completely mobilized, it scales automatically for desktop, tablet and smartphone. Navigation is intuitive, with simple product breakdowns.

"We wanted a website that would provide our customers with fast and easy access to our products," said Lynn Oien, Delta "T" Systems president. "The goal was to also expand the documentation side, building-out our resource library and adding educational pieces, such as Airflow 101."

The website includes PDF production specifications, and application data worksheets for both ventilation and dry exhaust projects. Complete 49-page catalogs are available for free download in English and Spanish.

Delta "T" Systems designs and engineers complete marine ventilation systems. It manufactures in the USA a full line of quality fire dampers, axial and duct fans, blowers, louvers, moisture eliminators, weather closures and controls.
