MARINE OFF-LOAD HOOKS PREVENT ACCIDENTAL DROPS

Even with SOLAS Chapter III, Regulation 20 conventions in place, injuries and fatalities still occur with sub-standard lifeboat hooks opening unexpectedly. Cranston-Eagle Marine Off-Load Hooks will absolutely not open under load. The safest and most reliable on the market, they're available exclusively in the United States, and Central and South America from Delta "T" Systems.

Cranston-Eagle Marine Off-Load Hooks are engineered so that only when weight has been taken off, and the cable pulled, will the locking mechanism open—there is no on-load release capability. Built of 100% stainless steel for use in extreme environments, they're available in capacities from 2.5–12mt, and in cable- and boat-mounted configurations. Designed for maximum safety and reliability, they're SOLAS certified and USCG approved.

Per IMO and SOLAS rules, lifting appliances need to be tested and recertified every five years. Delta "T" Systems is authorized to tear down and clean the hook, rebuild it, perform load and dye penetration testing, and issue recertification documentation. Standard turnaround time is two weeks, with shorter available.
