**MARINE HOOKS NEED REGULAR MAINTENANCE TO ENSURE SAFE USE**

Cranston-Eagle Marine Off-Load Hooks from Delta "T" Systems are among the safest and most trusted on the market today; they simply will not open under load. Yet, they require minor onboard servicing and scheduled IMO- and SOLAS-mandated load testing and recertification. This will ensure a long service life providing the safety they were engineered to deliver.

In contrast to most deck gear, maintaining a Cranston-Eagle Marine Off-Load Hook is straightforward. A visual examination should be completed each time the hook is used. Parts must move freely, so it should be lubricated monthly with machine oil, silicon spray or antifreeze, but never grease. If dents or undue wear are noticed, it should be removed from service and returned for inspection. The lock pin and latch springs must be replaced every 30 months. A detailed easy-to-follow 10-point schedule is at [bit.ly/HookMaintenance](http://bit.ly/HookMaintenance).

Every five years, Cranston-Eagle Marine Off-Load Hooks need to be sent to Delta "T" Systems for service, load and dye penetration testing, and recertification. The hook is completely stripped and all parts inspected before it's entirely rebuilt. Hidden issues such as microscopic cracking and hydrogen embrittlement are spotted by trained engineers and can be addressed before a failure leads to injury or death.

With lifting capabilities from 2.5–12mt, Cranston-Eagle hooks are made from 100% stainless steel for unrivaled strength. Cable- and boat-

mounted versions are available, with the pull-cable quick release types SOLAS certified and USCG approved. Used on naval and commercial vessels worldwide, they deliver unequalled safe launching of fast rescue craft and other small boats.

Delta "T" Systems is the exclusive distributor of Cranston-Eagle Marine Off-Load Hooks in the United States, and Central and South America. It warehouses a full line of parts with fast turnaround times.
