## VERSATILE EXTERIOR LED LAMPS PRODUCE DUAL COLORS

Bright white light is great when working or performing a specific task but often a softer tone or secondary color is desired. Owners can now benefit from two alternating LED hues with the new Dual Color Sea Hawk-XL lamps from Hella marine.

Measuring 6.69" W x 2.68" H x 2.28" D, each lamp features two rows of bright white LEDs producing 680 lumens for working, docking, diving or fishing. A third row of alternate color LEDs increases versatility. Red LED models preserve night vision for commercial use, ocean racing or sportfishing. A blue LED version enhances the boat's appearance, and a warm white option matches interior lighting and creates a softer hue for more comfort.

The Sea Hawk-XL lamps feature a corrosion-resistant, thermal polymer ceramic housing that is completely sealed to IP 67 standard. Its unique design distributes heat away from internal components for longer life. A heavy duty, Swiss-made Grilamid lens provides exceptional resistance to impacts, and both UV and chemical damage.

These lights offer low power consumption (<12W) and Multivolt™ circuitry that provides steady, even illumination from 9-33V DC. A 316 stainless steel bracket provides robust mounting and permits vertical adjustment of the lamp without tools. Backed by a full 5-year warranty, MSRP of the Hella marine Dual Color Sea Hawk-XL ranges from \$299-\$314.
