NAVIGATION LIGHT ADAPTER ENABLES HORIZONTAL MOUNTING

Navigation lights are necessary on a vessel, but available mounting configurations can be less than ideal. Hella marine solves these challenges with its new Horizontal Adapter, which creates more installation options for its line of NaviLED PRO Navigation Lights.

The Horizontal Adapter mounts in either an upright or pendant orientation, enabling easier placement of Hella marine NaviLED PRO lights in locations such as towers or shutter boxes. It also increases the overall lamp dimensions to better service larger boats, as NaviLED PRO models are internationally certified for vessels up to 164 ft.

A high-quality, sealed installation is possible due to the adapter's raised base, which allows space for a reliable cable gland. Its innovative design features hidden fasteners to give the NaviLED PRO Horizontal Adapter a tidy look. And, water can drain from flow paths molded into the top and bottom of the unit, enabling flexible installation choices.

The Horizontal Adapter's common mounting hole footprint facilitates easy upgrades from incandescent lamps to trusted Hella marine NaviLED PRO models. Made from the same molded material as the NaviLED PRO shroud, it will not discolor, corrode or become brittle even after long term UV and saltwater exposure.

-more-

NaviLED PRO Navigation Lights offer ultra-low power consumption, a maintenance-free design and bright and reliable illumination. Each affords unparalleled durability, with no bulbs to burn out or filaments to break in harsh seas.

Hella marine navigation lights allow clear indication of a vessel's movement and heading through advanced LED optics. This provides optimum horizontal and vertical light distribution with precise cut-off angles. With an over 90% reduction in power draw, these LED lights provide more illumination per watt than traditional bulb lamps.

The Hella marine NaviLED PRO Horizontal Adapter is sold in pairs, separate from the lamps, available in white or black. Suggested retail price is \$16 per pair.
