ENORMOUS ILLUMINATION IN A RUGGED, COMPACT HOUSING

Working on a ship, barge, platform or marine terminal is hazardous enough without contending with poor lighting. Hella marine's new RokLUME 280 and 380 LED floodlights provide enormous illumination in a compact housing. Developed for heavy duty applications in extreme environments, they're ideal where space is tight or accessibility limited.

RokLUME LED floodlights are available in three beam styles: close range, long range and pencil beam. Their aluminum housings are vibration resistant and NanoSafe coated for easy cleaning. They're rated IP 6K8 immersible, and IP 6K9K dust-proof and sealed against high-pressure washing. High-impact hardcoated PC lenses are rugged and long-lasting, and don't distort the daylight-like 5,000° Kelvin color temperature.

Both RokLUME LED floodlights offer over-voltage protection and come with double-insulated silicone supply cables. A heavy-duty surrounding bracket makes installation and aiming easy.

The RokLUME 380 puts out a commanding 7500 lumens through its 12 high-performance LEDs. Using 84W, it measures 7" W x 5.8" H x 4" D.

Hella marine's RokLUME 280 has eight high-performance LEDs that throw 4,300 lumens, yet use only 55W. It's 5.6" W x 5.7" W x 3.3" D.

Protected by a 5-year warranty, the Hella marine RokLUME 380 has a suggested retail price starting at \$520. The RokLUME 280 starts at \$330.
