100 AMP FITTINGS DESIGNED WITH RELIABILITY IN MIND

Hubbell Marine was the first to offer 100 amp marine-grade devices and designed them with safety and dependability in mind. Developing this standard with the National Electric Code and the American Boat and Yacht Council, the company's 100 amp fittings are used by boaters worldwide.

Both inlet and connector are built with nylon housing to provide increased safety and abuse resistance. Their high-impact thermoset contact carrier is arcing and heat resistant.

The gray shore power inlet has a gasketed, spring-loaded cover which closes automatically when not in use. Rotating the cover makes the inlet completely watertight. Nickel-plated solid brass pins provide for long life and reliable electrical contact in corrosive environments. Special keying makes proper alignment of mating devices quick and easy.

Hubbell's yellow Zytel, super-tough connector body features two screw pressure terminals for additional reliability. Neoprene glands are provided in graduated sizes for use with varying cable sizes. They assure a highly reliable watertight seal at the cable entry to the device. Massive external cable grips protect the wiring from the conductor movement, eliminating strain on the terminals.

Prices for Hubbell Marine's 100 Amp Fittings start at \$300.
