HUBBELL OFFERS CABLE SET CASH REBATE

Regularly replacing shore power cable sets is one way to make boating safer and more enjoyable, knowing dependable equipment is in use. Hubbell Marine is sweetening the idea of upgrading to its 50 amp, 50' cable set by offering a \$50 cash rebate.

The promotion is valid on product purchased from a participating retailer between March 1 and June 30, 2017. Owners then visit www.marinerebates.com and click on the Hubbell Marine logo for the rebate form.

Hubbell Marine cable sets are UL listed and made in the USA. Its 50 amp models use fully molded designs and threaded sealing rings to prevent moisture intrusion. Exclusive wiring crimp terminations create tight connections and reliable power delivery. A strain relief bull ring protects against stress on the conductors. Hubbell uses jute filler in its products for maximum cord flexibility.

The company's LED 50' cable set features small molded-in lights at the female end. Visible even in direct sunlight, a green LED confirms electricity is flowing while red warns of incorrect wiring at the power source. Hubbell also offers a more economical standard 50 amp cable set without LEDs. Both are available in white or yellow. Suggested retail prices are \$850 for a standard 50' cable set and \$899 for the LED model.
