25 DIFFERENT SWITCH MODELS FOR ANY MARINE APPLICATION

Often overlooked, quality switches are an important element of any 12V DC electrical system. Hubbell Marine offers 25 models of durable rocker, toggle and push-button switches made specifically for marine use and designed to complement any boat décor.

Hubbell Toggle and Rocker Switches are available in a wide variety of configurations to meet any application, such as bilge blowers and pumps, gauges, lights, starters, trim tabs, winches, windlasses and wipers. Single and double pole, and single or double throw are offered, as are a broad assortment of on, off, and momentary switching options.

Toggle Switches fit industry standard 1/2" mounting holes in panels up to 3/16" thick when using the included back-up nut, or 1/4" without. They're available in black, with a red or green lighted lever, and with an illuminated red tip. An optional silicone rubber boot bonded to a brass nut provides a positive seal against moisture and dust.

Rocker Switches require a 1-1/2" x 7/8" rectangular cutout. They're available non-illuminated or with a built-in pilot light for night vision.

Hubbell's Push-Button Horn Switch has a 15/32" nickel-plated brass mounting stem; terminals are 1/4" spades for simple installation. A rubber boot is available for use in exposed locations.

MSRP for Hubbell Marine switches starts at \$7.95.
