HUBBELL MARINE IMPROVES ITS 100A LINE

Hubbell Marine's 100A ship-to-shore pin and sleeve cable sets, connectors and inlets have a well-deserved reputation for maximum electrical transfer and unequalled toughness. New upgrades make their performance, durability and ease of installation even better.

Built for an unforgiving marine environment, Hubbell Marine 100A products are now UL witnessed IP69k rated for water and dust ingress protection and UL Type 4X and 12 approved. They have a V-0 flammability rating to improve safety. Each cable set is fully tested at the factory.

New impact- and chemical-resistant, UV-stabilized PBT housings better combat the elements for long product life. Connector locking rings now use integral torque tabs to facilitate proper gasket engagement. Fully shrouded, compact and durable internal swing arms on female devices protect against damage.

Hubbell Marine 100A cable sets, connectors and inlets are available in 125/250V and 30Y 120/208V configurations. Select inlets, receptacles and connectors are offered in 30Y 277/480V. Products ship installation-ready. Connectors now feature pocketed recessed screws to alleviate screwdriver slippage, both located on one side for easier securing.

Catalog numbers are molded into the housings and remain unchanged. Prices for Hubbell Marine's 100A ship-to-shore products start at \$495.
