## 50 AMP CORDSETS DELIVER RELIABLE CONNECTIVITY

A boat's electrical connections are vital to safety aboard. Owners can rest assured knowing they can count on Hubbell Marine's reliable 50 amp cordsets. The company also offers cords with Power-On and Incorrect Wiring LED lights to indicate the unit's status, so users will never again have to question if their products are functioning correctly.

Hubbell's cordsets feature a thermoset contact carrier that is arc and heat resistant. Their totally molded design delivers superior waterproofing and durability. Exclusive copper crimp barrel terminations provide tighter connections and longer life. A bull ring brings strain relief on the terminals, while a molded-in flex feature controls the angle of cord entry and keeps out water.

The cord's nickel-plated brass shell and contacts help prevent corrosion. A metallic threaded ring provides a watertight seal when mated with the shore power inlet. The lip protects the plug/receptacle connection from moisture.

Some of Hubbell's 50 amp cords feature two bright, durable LEDs. A green light indicates Power On and red designates Incorrect Wiring at the power source. These high-intensity LEDs are visible even in bright sunlight.
