100 AMP CABLE SETS DELIVER RELIABLE POWER

Increasingly sophisticated electronics place greater demands on a boat's electrical system, making reliable shore power connections more essential than ever. Hubbell Marine was the first in the market to offer 100 amp, marine grade ship-to-shore Cable Sets in 3, 4, and 5 wire configurations. They're made in the USA for uncompromising durability and superior performance.

Each of Hubbell's 100 amp Cable Sets utilize a high visibility yellow STOW cable that's 105°C rated and UL listed to meet or exceed the highest safety standards worldwide. The company offers both 125/250V and 120/208V configurations. Watertight, ABYC-compliant and fully corrosion-resistant, they come in 22.8m, 30.4m and 38m lengths to suit a wide range of marine applications. A 15.2m extension cord is also available.

Hubbell Marine developed the standard for 100 amp Pin and Sleeve devices with the National Electric Code and the American Boat and Yacht Council. Each cable set is fully inspected and tested to ensure quality performance.
