## SHORE POWER SET DESIGNED SPECIFICALLY FOR MEGAYACHTS

Yacht owners and their guests expect every convenience onboard that they would enjoy at home, including an unlimited supply of electricity. Hubbell Marine's 200 amp ship-to-shore system ensures uninterrupted power access while in port.

Hubbell offers the world's only UL1682-listed, CSA-certified 200 amp ship-to-shore system. Its components utilize a durable exterior housing made from copper-free aluminum treated with an electrostatically-applied epoxy/polyester finish for superior water and corrosion resistance. The unique design includes a clamp that captures the cable at four separate points for superior retention, while accepting a cord range of #1 AWG-250 MCM for maximum compatibility.

Pins and sleeves are crafted from nickel-plated Tellurium copper for unmatched corrosion and heat resistance. Terminal screws feature swivel/pressure pads to secure and protect the conductor strands.

This system's versatility includes full compatibility with other UL1686 Series C1-listed devices and the ability to mate to UL1682 components from Cooper, Crouse-Hinds, Arktite or Appleton Powertite. Hubbell's 200 amp ship-to-shore system includes a full range of back boxes and pin-and-sleeve devices for megayacht or commercial craft applications.
