

COLOR SCREEN AND ROTARY ENCODER RECEIVER FITS 3.5" CUTOUT

Dashboard space is always at a premium. That's why the JBLPRV275 all-weather stereo receiver from Prospec Electronics makes so much sense. Using a standard 3.5" round cutout, it offers OEMs and DIYers up-to-the-minute features like a rotary encoder, 2.75" color screen and video input.

The JBLPRV275 is simple and intuitive to use. The push and turn rotary encoder and full-color screen make navigating its menus a breeze.

JBL understands how people listen to music. That's why the JBLPRV275 is so adaptable. Bluetooth® makes it easy to stream audio with ID tagging from a mobile device. The stereo offers three inputs—USB, aux and video—and is wired remote ready. It plays traditional AM/FM and weather band broadcasts.

A top-quality outdoor stereo needs to pump the volume and the JBLPRV275 doesn't disappoint. It packs a punch with 4 x 45 watts of pure, raw power and boasts 2 ohm stability, enabling up to eight speakers to be wired to it (parallel wiring) without the cost of an additional amplifier.

Wiring the JBLPRV275 is straightforward. It has three pair of pre-outs, including a sub out. Its clean, black housing will integrate into any décor. Available from Prospec Electronics, it costs \$299.95.
