REVOLUTIONARY MACERATOR ELIMINATES MESSSES

Typical macerators allow waste spills during maintenance. But, Raritan's macerator pump with wastewater valve is a direct replacement that eliminates these messes. It also allows users to remove the pump without disconnecting plumbing.

For maintenance, owners simply shut off the valve and remove two screws. The pump slides out without any spillage. It can be seen in action at <http://bit.ly/1NjWedQ>.

The Raritan Macerator Pump uses all stainless steel bolts to avoid corrosion problems. A spring-loaded Viton shaft seal is used to prevent premature leaks, while a proprietary rubber impeller compound allows a longer dry running time.

An optional Smart Macerator Control (SMC) monitors the motor and pump to prevent dry run and overload. It will shut down the pump if it doesn't prime in seven seconds, runs dry for five seconds or draws more than 20 amps. If power is not turned off to the control, it will jog the pump for a few milliseconds every seven days to prevent binding of the impeller.

Raritan's macerator pump has a price range of \$235-310.
