## POWERFUL NEW MANUAL HEAD IS A SIMPLE RETROFIT

Most boat owners would agree that the more efficient a manual marine toilet can be, the better. The new PH SuperFlush from Raritan Engineering flushes quickly and features modern design conveniences. Its common base mounting pattern also makes it an easy upgrade to install.

The bowl content on the manual PH SuperFlush clears with fewer strokes, thanks to the state-of-the-art pump. This engineering marvel's double-action piston is 66% larger than competitive models. A 1-1/2" joker valve on this powerful head prevents backflow for trouble-free use.

The PH SuperFlush features an industry first for a marine-size manual head: A soft close lid that lowers silently into place instead of slamming. It also prevents sideways movement of the seat when the boat is rocking.

Upgrading to the PH SuperFlush is simple, as its mounting base dimensions match the bolt hole patterns of most competitive toilet models. A lever-style handle makes for effortless pumping, even in longer and higher plumbing configurations. The PH SuperFlush pump and base mounting are reversible to change to left-hand operation.

It features a dry-flush option, and can be mounted above or below the waterline. The P101 model has a marine-size bowl and measures

-more-

approximately 13" H with the lid closed, 17-3/4" W and 17-1/4" D. For model P102 with a residential-size bowl, these measurements are roughly 13-1/8" H x 18-1/4" W x 20" D.

Raritan Engineering builds its PH SuperFlush pump with engineered polymer to last. Each toilet is individually assembled and tested by hand in the USA. Suggested retail price for Raritan PH SuperFlush model P101, with a marine-size bowl and soft close seat, is \$550.
