SYNCHRONIZED CONTROLLER ENDS ANNOYING MISTIMED WIPER SWEEP

Windshield wipers that sweep asynchronous can be annoying while keeping watch. Schmitt & Ongaro Marine provides mariners a distraction-free view of the seas ahead with its new Synchronized Wiper Controller.

The unit simultaneously controls one to three motors for synchronized sweep at slow, fast or intermittent speeds. Users can select to wipe all the windscreens together or just the helm station.

The provided rocker power switch also runs the wash system. If the controller is set at slow sweep, it will speed up the motors while washing.

The innovative controller draws a maximum of 5A and is available in 12V or 24V. Both slow and fast speed settings have their own circuit for efficient operation and maximum torque. If a motor becomes overloaded, the power will break automatically.

Like all products from Schmitt & Ongaro Marine, the Synchronized Wiper Controller is built to the highest standards to reliably perform in a marine environment. It comes with a three-year warranty and has an MSRP of \$244.85.
