UNIVERSAL-FIT CENTER NUTS OFFER STYLE AND VALUE

Expanding on its extensive line of attractive and high-quality boat wheel trim, Schmitt & Ongaro Marine introduces its Faux Center Nuts. A practical and versatile choice, these striking center nuts are designed with style and value in mind. They're a perfect match to the company's cast wheels, such as its popular stainless steel Vision line.

Builders and distributors no longer need to stock multiple variations of threaded center nuts. These universal-fit Faux Center Nuts snap into place on a choice of two bases. One fits 19mm mechanical or 12mm steering systems, such as for SeaStar or Uflex. The other is for 24mm hydraulic systems, like Hynautic.

Faux Center Nuts are available in traditionally-finished 316 stainless steel or gleaming, chrome-plated ABS. The durable, cast stainless version can be engraved for boat builders by Schmitt & Ongaro Marine for a custom, finished appearance. Customers can order packages with either nut and one or both bases for leaner, more efficient inventories.

As with all its products, these new economical center nuts represent Schmitt & Ongaro's continued dedication to workmanship, attention to detail and production optimization. Both the stainless steel Faux Center Nut and the chrome-plated ABS models come standard with one base.
