SMARTPLUG UNVEILS NEW PACKAGING

To match its revolutionary product, SmartPlug Systems launches new packaging and a SKU to go with it. The 30 amp, 50' cordset and inlet are now nested together in a sharp-looking, easy-to-carry case.

"With the addition of this SKU, we continue to grow our product line and provide better selection for dealers and consumers," said Ken Smith, SmartPlug founder. "The unique packaging also matches the innovative product inside."

The SmartPlug connector and inlet protect against the leading causes of fire and electrocution: loose connections and overheating. The unique sleeve configuration allows any pressure or force to be absorbed by the assembly's body, not the electrical pins. SmartPlug's 30A Cordset is constructed with the finest materials available, including 316 marine-grade stainless steel and UV- and impact-resistant plastics. Most notably, it features US-built, end-to-end tinned copper wire.
