RVS WITH 50 AMP POWER NOW SAFER

50 amps is a lot of power; it'll run an air conditioner and a microwave. It can also overheat connectors and inlets, and potentially cause a fire. Revolutionary SmartPlug Systems overcomes the inadequacies of traditional twist-type plugs with its 50 amp 125/250 volt Connector & Inlet Combo Kit (B50ASSY).

The innovative SmartPlug provides many times the metal contact than twist-type plugs for maximum electrical transfer, while minimizing resistance and overheating. It's Intertek ETL listed and certified to UL standards.

SmartPlug's asymmetrical design pushes straight in and automatically aligns the plug with the inlet, making it easier to use. A multi-point locking system ensures it stays securely attached to the weatherproof inlet for maximum performance and safety.

The system installs in minutes using common household tools. All of SmartPlug's inlet mounting holes match RV industry standards. It's available in white, grey or black flame-resistant custom polycarbonate alloy, or marine grade 316 stainless steel.
