

AWAY FROM A MARINA, SMARTPLUG HAS THE SAFER SOLUTION

For owners who find themselves without access to typical marina power but want to use standard household current, SmartPlug can help. Its new 15A 120V Dual Configuration Cordset has a standard three-prong plug on one end and the innovative SmartPlug on the other. Whether a boat is in a yard up on jack stands, on a trailer or in a slip, it's the safest way to run a few electrical components or top-off batteries.

The Dual Configuration Cordset is super flexible and is easily coiled, even in cold weather. Ideal for recharging electric boats, it has a blue LED power indicator light that glows when power is on. Completely sealed, it's available in 4', 25' and 50' lengths.

The revolutionary SmartPlug replaces an outdated, 80-year old invention: the traditional twist-type shore power connector. With double-sidelocking clips and an asymmetrical shape, it's easier to use. The unique design allows the assembled plug and inlet to absorb the force of an impact; there is no load or stress on the electrical connection. With more than 20 times the metal-to-metal contact, it provides greater protection against resistance and overheating—the leading causes of power failure and boat fires.

Contact SmartPlug Systems, 2500 Westlake Ave N., Ste. G, Seattle, WA 98109-2262. 206-285-2990; Fax: 206-285-2981. Sales@smartplug.com; www.smartplug.com; www.facebook.com/SmartPlug; twitter.com/smartplugs.

Editor's note: Visit SmartPlug Systems to see the Dual Configuration Cordset and learn about the company's exciting future at IBEX, October 1-3, Tampa, booth 3-209.
