## TRUE HARBOR INTRODUCES UNIQUE DECK PANELS FOR DOCKS

True Harbor, a business focused on helping dock owners create beautiful shorescapes, announces the introduction of TrueDeck™ engineered-polymer Deck Panels. TrueDeck panels set a new standard in beauty and durability at a reasonable cost. Their 4-way pattern design forms a pleasing, continuous pattern, even in T- and L-shaped dock applications. With less labor and cost to install, plus lower weight and greater strength than competitive brands, these innovative Deck Panels provide many benefits to dock and marina owners.

Specifically designed for marine use, TrueDeck panels are fully UV protected, supplying a rich appearance for years to come. They are constructed of state-of-the-art engineering resin, a time-tested material widely employed in outdoor applications with superior results. It can endure extreme heat, cold and exposure to the sun, yet remains cool underfoot.

Maintenance-free, these unique Deck Panels offer a self-draining, slip-resistant surface that practically cleans itself. The panels are environmentally-friendly, designed to allow light, water, wind and debris to pass through. The openings are compliant with ADA standards. They permit 42% light transmission to meet environmentally-sensitive installations over sea grass, while enhancing underwater plant growth and

fish habitats. True Harbor panels will not support mold or mildew growth and are unaffected by marine borers, salt water and pretty much anything else mother nature can throw at them.

TrueDeck panels feature recessed top fastening for aesthetics and ease of installation. Their high-performance construction delivers a stiffer feel underfoot and the best strength-to-weight ratio on the market.

Weighing only 1-1/4 lbs. per sq. ft., the convenient Deck Panels are available in 3' x 4', 4' x 4' and 5' x 4' sizes to replace aging dock tops in existing frames or for new dock or swim platform construction. Larger than comparable decking products, TrueDeck panels save on labor costs and require about 1/4 of the time to install. These economical panels require fewer fasteners and overall panels to complete a dock with a lower total weight.

Rugged yet beautiful, TrueDeck Dock Panels from True Harbor are available in Cape Cod Gray or Sarasota Sand colors and come with a 12-year limited warranty.

True Harbor is located at 2145 Cole Street in Birmingham, MI 48009. Contact True Harbor by Phone: 248-649-4922, Fax: 248-649-4933 or Email: [trueharbor@trueharbor.net](mailto:trueharbor@trueharbor.net).
