## TRUE HARBOR BRINGS J.D. WRIGHT & ASSOCIATES ON DECK

To make inroads into the Canadian market, True Harbor has chosen J.D. Wright & Associates Marketing to represent their unique, engineered polymer deck panels for docks. True Harbor president Dick Cantley made the announcement.

"Doug Wright has established a fine reputation in Canada as a highly successful manufacturers rep," said Cantley. "We put a lot of effort into researching all the possibilities, and J.D. Wright was the clear choice to bring our eco-friendly deck panels to Canada's pristine waters."

Established in 1986 and based in Barrie, Ontario, J.D. Wright's territory includes central and eastern Canada, concentrating primarily on Ontario and Quebec, but also serving Saskatchewan, Manitoba, New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland.

True Harbor's innovative design allows light, water, air and debris to pass through, resulting in a maintenance-free deck. Made of an eco-friendly engineering resin, the panels are lightweight and UV resistant. Installation time and cost are reduced with its large panels that require fewer fasteners and no joining strips.

True Harbor is known for its good looks with a 4-way pattern that makes T- and L-docks look seamless. With a choice of Cape Cod Gray or Sand color, True Harbor is available in 3' x 4', 4' x 4' and 5' x 4' panels.
