

NEW TRUEDECK PANELS REVOLUTIONIZE BOARD-STYLE DOCKS

Many dock owners and builders are tired of splinters, refinishing and the back-breaking installations that come with heavy composite lumber decking. Now there's an alternative that provides the same timeless appeal of a board-style dock without all the weight. The latest from True Harbor, revolutionary TrueDeck Woodbeam™ Panels are 70% lighter and install in less than 1/4 the time of traditional lumber docks.

The 12 lb., 2' x 4' TrueDeck Woodbeam Panels make the task of Spring installation and Fall removal a lot easier, saving time and labor costs. Providing an incredibly realistic look and feel, the attractive TrueDeck Woodbeam Panels have an innovative, slip-resistant wood grain surface. Available in two colors, Dockside Cedar and Quiet Gray, the panels complement their surroundings.

Designed specifically for docks, the durable TrueDeck Woodbeam Panels are constructed from superior reinforced engineering resin. Guaranteeing a long life, rich appearance and zero maintenance, the UV-stabilized material resists fading and is impervious to rot, mold, mildew and marine borers.

The state-of-the-art panels install quickly and easily using screws and can be built with both metal and wood dock frames. Economical, the stunning TrueDeck Woodbeam Panels from True Harbor boast an unmatched 12-year limited warranty and have a suggested retail price of about \$6 a sq. ft.
