COOLING A LARGE VESSEL IS SIMPLE WITH A WEBASTO CHILLER

To cool megayachts and commercial workboats, an engineered solution built around a reliable, high-capacity chiller is required. Webasto Thermo & Comfort North America's BlueCool Q-Series and P-Series deliver the cooling performance and low amperage draw that professional mariners demand.

The BlueCool Q-Series and P-Series chillers are modular in concept. They're designed for a high level of customization to achieve the specific technical requirements of production and custom vessels up to 300'. Delivering flexible and compact applications, they're easy to integrate, maintain and service.

Configured with redundancy and up to six compressors, the BlueCool Q-Series chiller can be controlled by one central control system. It offers a cooling capacity of 500–1,500 kBTU/h, 42–126 tons. A solid metal frame ensures straightforward crane or forklift installation and easy serviceability. Voltages offered are 360–690 volts.

Webasto's BlueCool P-Series offers a massive 30,000–572,000 kBTU/h, 2.5–48-ton cooling capacity. A wide range of options is available including voltages 360–690, soft start, and cool-only and tropical versions. It offers improved electronics, fulfilling EMC standards EN 60945, and can be configured with CAN-bus for integrating into the vessel's central monitoring system.

-more-

Webasto supports boatbuilders throughout the HVAC build process to deliver full client satisfaction. The proven performance of its products is backed by a two-year warranty, and a strong global service and support network.
